VERY LARGE BUSINESS APPLICATIONS
Carl von Ossietzky Universität Oldenburg

Goal

Main goal of the current demo is to establish connection from java programming language to the SAP HANA DB via JDBC and to execute simple query in order to retrieve data from database.

Notes

Before running this demo proper objects must be created inside SAP HANA DB and data must be loaded. Also fields with credentials inside java code must be changed to meet requirement of target system with installed SAP HANA. For further information check *README.md* file.

Initial software requirements

To start with the demo the following tools are required to be installed on the PC:

- Latest JDK

Running the demo

It's possible to run demo on Linux and Windows machine. To run on Windows use 'run_win.bat', to run it on Linux machine use './run_linux'. For further information check *README.md* file.
